CERTIFICATE OF COSMIC ORIGIN	
We certify that the dial of this Corum watch has been carved out of a genuine meteorite which has been authenticated by our experts as such and has the following characteristics:	
NAME OF METEORITE:	CANYON DIABLO
PLACE OF DISCOVERY:	Arizona, U.S.A. 36°2'N, 111°2'W, 1750m
SCIENTIFIC CLASSIFICATION:	Coarse octahedrite (A.B.W.W.)
FOUND:	1891
FITTED IN WATCH (No. OF CASE):	405081/N°061

You are now the discriminating possessor of a rare and prized meteorite specimen.

Present day science has made a thorough study of most meteorites but further discoveries will develop new clues and your individual cosmic fragment could, in the future, contribute to penetrating the mysteries of the universe. The day is approaching when you might be able to identify the asteroid that is the parent body of your «talisman» from outer space.

Proof of cosmic origin of your meteorite:
Meteorites have their own «thumb-prints», structural peculiarities and chemical composition that leave no doubt as to their extraterrestrial origin. Your meteorite has particular features not present in any earth minerals like the pattern of crystallization which appears when the cut and polished face of an octahedrite meteorite is etched with acid, called the Widmanstätten figures. This is an absolute proof.

Date: 29th May 1986
