GIA REPORT
2175385492

This is the report to provide

GIA DIAMOND GRADING REPORT

November 17, 2015
 GIA Report Number 2175385492
 Shape and Cutting Style Round Brilliant
 Measurements 10.24 - 10.27 x 5.97 mm

GRADING RESULTS

Carat Weight 3.34 carat
 Color Grade D
 Clarity Grade VVS1
 Cut Grade Excellent

ADDITIONAL GRADING INFORMATION

Polish Excellent
 Symmetry Excellent
 Fluorescence None
 Inscription: GIA 2175385492
 Comments: Clarity grade is based on internal graining that is not shown.

DIAMOND TYPE CLASSIFICATION FOR GIA DIAMOND GRADING REPORT #2175385492

Scientists classify diamonds into two main "types" - type I and type II - based on the presence or absence of nitrogen which can replace carbon atoms in a diamond's atomic structure. These two diamond types can be distinguished on the basis of differences in their chemical and physical properties. Type II diamonds contain little if any nitrogen and they are subdivided into two groups (IIa and IIb) both of which are quite rare (less than 2% of all gem diamonds).

According to the records of the GIA Laboratory, the 3.74 carat Round Brilliant diamond described in GIA Diamond Grading Report #2175385492 has been determined to be a **type IIa** diamond. Type IIa diamonds are the most chemically pure type of diamond and often have exceptional optical transparency. Type IIa diamonds were first identified as originating from India (particularly from the Golconda region) but have since been recovered in all major diamond-producing regions of the world.

Among famous gem diamonds, the 530.20 carat Cullinan I and the 105.60 carat Koh-i-noor are examples of type IIa.
