GEMSTONE REPORT
EDELSTEINBERICHT
RAPPORT DE PIERRE PRECIEUSE

No. GRS2021-071614
Date 6th August 2021
Object One faceted gemstone
Identification Natural Ruby

Weight 1.12 ct
Dimensions 6.68 x 5.09 x 3.74 (mm)
Cut brilliant/step (4)
Shape oval
Color vivid red (GRS-type "pigeon's blood")
Comment No indication of thermal treatment
FTIR-tested

Origin
Gemological testing revealed characteristics corresponding to those of a natural ruby from:
Burma (Myanmar)

Dr. A. Peretti, FGG FGA
FurGene (European Gemology)

GÜBELIN

GEMMOLOGICAL REPORT

Report Number 21081310 / 1 and 2	Colour red to pink-red
Date 14 September 2021	Tradecolour A few of the rubies are called pigeon blood red
Item Fourteen faceted gemstones set in a pair of ear-pendants	Species Natural corundum
Weight total weight of rubies: 8.03 ct (as indicated by the client)	Variety Ruby
Shape oval	Origin Burma (Myanmar)
Cut brilliant cut / step cut	Condition No indications of heating (NTE).
Measurements from approx. 4.50 x 3.95 x 2.35 mm to approx. 6.65 x 5.05 x 3.70 mm	Comments See Information Sheet(s). <small>Important notes and limitations on the reverse.</small>
Transparency transparent

INFORMATION SHEET
to Report No. 21081310 / 1 and 2

Unheated rubies

Large rubies of gem-quality are rarely found in nature. Not only is a delicate mineralogical balance essential for this red variety of corundum to be formed deep within the earth, but specific geological conditions as well as adequate pressure and temperature must also be present. Furthermore, the sufficient supply of a rare combination of chemical elements, such as aluminium and chromium, are yet another necessity required for the formation of rubies.

Over the past decades, various heating techniques, as well as the use of chemical additives, have been introduced to increase the supply of rubies resembling the high-quality untreated specimens. The aim of these treatments was and still is to improve the visual appearance of the gemstones.

Prior to the advent of modern heating techniques, rough rubies were cut and polished retaining the quality that nature had originally endowed them with. Therefore, in earlier times, rubies with obvious imperfections were considered and accepted as the norm. However, the expectations with respect to quality (colour and transparency) rose steadily.

The demand for natural, unheated rubies kept growing while the supply of such gems remains highly limited, making natural rubies of gem-quality from all major sources, such as Burma (Myanmar), Mozambique, Madagascar, Kenya, Tanzania, Vietnam, Afghanistan and Tajikistan, difficult to find.

Information sheets are intended to provide information supplementary to the contents of the Report and comment on, for instance, the origin of gemstones, the geographic origin and the presence or absence of treatments. In addition, information sheets are purely informative in nature. They cannot be a detailed list and are issued for all types of items of this particular category. Information sheets, therefore, do not make a certain quality or origin of the items described in the catalogue (Lot-Numbers) which is attached to.
