The gemological analysis of diamonds, precious stones and other mineral must be carried out by gemologists with many years' experience in the field who have a keen sense of the professional code of ethics governing their work as well as thorough knowledge of crystallography, optical and physical phenomena.

The identification of the various species and varieties of stones, the distinction between natural and synthetic materials, as well as various treatment methods currently encountered are all very sensitive factors. More specifically for diamonds, the law of reflection and dispersion of light, the related geometric data as well as knowledge of all aspects involved in the cutting process are essential.

This gemological report is provided upon request of the customer under the belief of the gem. By making this report IGI does not agree to purchase or resell the article, neither for nor any member of its staff and, at any time, is held responsible for any discrepancy which may result from the application of other grading methods, neither the client nor any purchaser of the gem shall request this report as an appendix nor as guarantee or warranty.

This report is subject to the terms and conditions set forth above and on reverse.
