The Prestige Gemstone Report™

Document No: 807246 Validation Date: 9 February 2018

Identification

Mining Type: Natural (Beryl) Color Description: Green

Gross Weight: Not Determined Shape: Oval to Round

Measurements: Approx. 9.6 x 7.9 x 7.23 mm Cutting Style: Cabochon

Comments: Eight gemstones tested, all in a white metal prepared with numerous small diamonds (classified as secondary)

Origin

Provenance: Colombia

Comments: Based on available gemological information, it is the opinion of the Laboratory that the origin of the material would be classified as Colombia

Enhancement

Enhancement: None

Standard: Clarity

Degree: Minor

Type: Traditional

Stability Index: Very Good to Good

Comments: Emeralds are commonly clarity enhanced to reduce the visibility of inclusions. Traditional materials used to clarity enhance gemstones include various oils (such as Cedarwood oil and cedar/Pearl-oil), as well as others.

Enhancement Stability Index*

Degree of Clarity Enhancement & Relative Risk†

General Report Comments:

AGL

American Gemological Laboratories™

America's first and most highly respected origin lab.

Founded in 1977, AGL is an internationally recognized gemstone testing facility specializing in non-invasive, colored stone analysis.

AGL has the distinction of being the first laboratory in the United States to issue Country of Origin reports. Our scientists and its principals have a long tradition of research into the detection of anti-reporting or gem identification and classification, gemstone treatments and gemstone determinations.

Our staff is composed of experts in the field of gemstone testing and reporting. Our findings reflect the latest knowledge and analytical techniques to ensure the highest standards are applied on every stone we test.

AGL's testing and reporting methodology provide you with unsurpassed quality and reliability. We are committed to providing the highest level of service and reporting that our clients and the industry have come to expect from the AGL.
