The gemological analysis of diamonds, gemstones and other minerals must be carried out by gemologists with many years experience in this field who have a keen sense of the professional code of ethics governing their work as well as thorough knowledge of cartography, optical and physical phenomena.

The identification of the natural species and varieties of stones, the distinction between natural and synthetic materials, as well as natural treatment methods, is carried out with the utmost care and responsibility. The identification of the natural species and varieties of stones, the distinction between natural and synthetic materials, as well as natural treatment methods, is carried out with the utmost care and responsibility. The identification of the natural species and varieties of stones, the distinction between natural and synthetic materials, as well as natural treatment methods, is carried out with the utmost care and responsibility.

This gemological report is provided upon request of the customer under the order of the gem, by making this report IGI does not agree to purchase or to sell the gem. Neither IGI nor any member of its staff shall, in any form, be held responsible for any discrepancy which may result from the application of other grading methods. Neither the client nor any purchaser of the gem shall regard this report as an appraisal nor as a guarantee of quality.

This report is subject to the terms and conditions set forth above and on reverse.
